PROFILE

B.Tech Computer Science student with a strong academic background specializing in backend development and AI applications. Passionate about building robust systems with AI intelligent features integrated. Actively seeking work opportunities to apply my problem-solving abilities and creative thinking within a forward-looking, high-impact engineering team.

EDUCATION

School of Engineering, JECRC University, Jaipur, Rajasthan *2023 – Present*

- **B.Tech in Computer Science and Engineering** | **Current CGPA: 8.9/10**
- **Relevant Coursework:** Data Structures & Algorithms, Object-Oriented Programming, Database Management Systems (SQL), Google Cloud.

St. Mary's Convent Sr. Sec. School, Jaipur, Rajasthan | CBSE Class XII | **Percentage: 90.2%** *2022 – 2023*

TECHNICAL SKILLS

- **Languages:** Python, Java, SQL (PostgreSQL, SQLite), JavaScript, HTML/CSS.
- **AI & ML:** Gemini API, OpenCV, Computer Vision, RAG, Agentic AI, Prompt Engineering.
- **Frameworks & APIs:** FastAPI, React, Flask, OpenAPI / Swagger UI, RESTful APIs, Pandas.
- **Developer Tools & Cloud:** Git/GitHub, Linux, Docker, AWS, Google Cloud, Bruno, Postman.
- **AI Coding Tools:** Cursor, Google Antigravity, OpenCode.

PROJECTS

Agentic AI Coding Assistant | GitHub **MAR 2026**

Tech Stack: FastAPI, React, Python, Gemini API, Tailwind CSS

- Built an interactive **AI coding assistant** powered by **Google Gemini** that performs automated file and code operations.
- Developed a **web workspace** featuring real-time response streaming, step-by-step progress tracking, and an interactive file viewer.
- Implemented a **sandboxed environment** to guarantee safe file modifications and code execution within dedicated workspace limits.

OpenKYC – Biometric Verification Platform | GitHub **SEP 2026 – OCT 2026**

Tech Stack: FastAPI, React 19, Python 3.13, OpenCV, Gemini API, Web Audio API

- Architected a **zero-cost ($0 API budget) multi-modal KYC pipeline** delivering automated ID extraction, 1:1 facial verification, and voice biometrics.
- Integrated **Google Gemini Flash** for structured document OCR alongside **OpenCV** to detect and auto-crop ID portraits with smart boundary padding.
- Built high-accuracy **face and voice matching models locally**, comparing live camera captures and voice recordings in milliseconds without sending user data to third-party APIs.

TGNJ Operations Platform | GitHub **NOV 2025 – JUL 2026**

Tech Stack: SQLite, Turso Cloud DB, Etsy OpenAPI, S3

- Helped business **scale output by 5x** (from 20 to 120+ items/day) while cutting overall processing workload by **50%**.
- Designed an **all-in-one desktop business app** that connects local stock tracking, cloud photo storage, and Etsy store listing into a single automated workflow.
- Automated **label printing and order tracking**, replacing manual spreadsheet data entry with instant sticker generation and real-time sales syncing.

OPEN SOURCE CONTRIBUTIONS

- **Kestra** (kestra-io/blueprints) – Merged **AI email triage** blueprint with a confidence gate for low-confidence cases. | PR #1791
- **Zyron Assistant** – Ported the assistant to **Linux** (4.8k+ lines, 23 files) and documented setup. | PR #31, #40
- **Zero-Cost CRM** – Wrote the **OpenAPI 3 spec** for the REST API (~2k lines) and added **Swagger UI**. | PR #67, #84

CERTIFICATIONS

- Google Cloud Foundations Certificate; Google Cloud Engineering Certificate.
